LOW	
Monday 7/31/2017	Winds: Light becoming west to northwest 5-15 mph Stagnation: No stagnation
LOW	

Forecast Continued:

Synopsis & Discussion

Forecaster: -S. DiBiase

Storm activity is expected to be less over the next day or so as a low grade monsoon takes over. But the recent rains should keep most of the dust down, so we have low dust risks forecast through Monday. An uptick in storm activity later in the work week and this upcoming weekend brings more chances for ground saturating rains. Stay tuned and check back tomorrow as weather conditions can and do change rather quickly during the Monsoon.
