

## Public Notice for Lakeside Lake TMDLs

The Arizona Department of Environmental Quality (ADEQ), in accordance with Section 303(d) of the Clean Water Act, is in the process of developing Total Maximum Daily Load (TMDL) analyses for Lakeside Lake in the Santa Cruz Watershed. Lakeside Lake has experienced exceedances in the standards for pH (high), DO (low), ammonia, and narrative nutrients in the form of excess algae growth.

A TMDL analysis defines the total amount of a particular constituent or pollutant which can be introduced to a water body without causing an exceedance of state surface water quality standards. The TMDL process enlists the participation of stakeholder groups and other interested parties to assist in identifying possible sources of pollution, to assign loads or "shares" of those pollutants to facilities (point sources) and landowners or land managers (nonpoint sources), and to identify the most reasonable measures that should be implemented in order for the stream or lake to achieve surface water quality standards.

ADEQ will release a draft version of the Lakeside TMDLs on February 16, 2005, and will accept written comments until 5:00 pm (MST) on March 17, 2005. Written comments should be sent to:
