#### Little Colorado River Watershed

#### **Watershed Description**

This watershed is defined by the Little Colorado River, from its headwaters to the Colorado River, and tributaries to the San Juan River which flow into north and east into New Mexico and Utah. This area contains horizontally stratified sandstone and limestone which have eroded to form canyon and plateaus. In a few areas, igneous rocks have deposited on sedimentary formations due to volcanic activity. Natural erosion can be easily increased by human activities in such locations.

Land ownership is divided approximately as: 60% tribal, 12% federal, 12% private, 6% state. This 26,794 square mile watershed is sparsely populated outside of Flagstaff, with 236,500 people (including Flagstaff) (2000 census). Land use is primarily open grazing, forestry, recreation, and mining. The area contains four national monuments, four wilderness areas, and two national forests with varying levels of use restrictions.

Elevations range from 12,600 feet (above sea level) at Humphrey's Peak near Flagstaff to 2,700 feet near the Colorado River. However, most of the watershed is above 5000 feet elevation, with desert highlands flora and fauna, and coldwater aquatic communities where perennial waters exist.

#### Water Resources

The climate provides approximately 10 inches of rain and 15 to 20 inches of snow yearly. Snow melt has been a primary source of water for this region. The flow on the Little Colorado River is "interrupted" (stretches of perennial, intermittent, and ephemeral flow). Perennial flow is generally limited to headwaters streams.

An estimate of surface water resources in the Little Colorado Watershed is provided in the following table. Waters on Tribal lands are not assessed by ADEQ; therefore, those statistics are shown separately.

#### **Estimated Surface Water Resources in the Little Colorado Watershed**

	Perennial	Intermittent	Ephemeral
Stream miles	640	1,655	9,635
	Perennial	Non-perennial	
Lake acres	16,050	6,830	

#### Additional Water Resources Located on Tribal Lands - Not assessed

	Perennial		Intermittent		Ephemeral	
Stream miles		305		170		15,310
	Perennial		Non-perennial			
Lake acres		5,295		118		

Ambient monitoring focuses on perennial waters; however, special investigations may identify water quality problems on intermittent and even ephemeral waters. Estimated miles and acres are based on USGS digitized hydrology at 1:100,000 and have been rounded to the nearest 5 miles or 5 acres.

#### **Assessments**

The Little Colorado River Watershed can be separated into the following drainage areas (subwatersheds):

La Plata River Drainage Area (Tribal Land - Not assessed)
Charco River Drainage Area (Tribal Land - Not assessed)
Cottonwood Creek Drainage Area (Tribal Land - Not assessed)
Chinle Wash Drainage Area (Tribal Land - Not assessed)
Oljeto Wash Drainage Area (Tribal Land – Not assessed)
Little Colorado River Headwaters Drainage Area
Upper Little Colorado River Drainage Area
Carrizo Wash Drainage Area
Zuni River Drainage Area
Silver Creek Drainage Area
Upper Puerco River Drainage Area (Tribal Land – Not assessed)
Lower Puerco River Drainage Area
Middle Little Colorado River Drainage Area
Wide Ruin Wash Drainage Area
Chevelon Canyon Drainage Area
Puerco Colorado Wash Drainage Area
Oraibi Wash Drainage Area (Tribal Land – Not assessed)
Polacca Wash Drainage Area (Tribal Land – Not assessed)
Jadito Wash Drainage Area (Tribal Land – Not assessed)
Canyon Diablo Drainage Area
Lower Little Colorado River Drainage Area
Dinnebito Wash Drainage Area (Tribal Land – Not assessed)
Moenkopi Wash Drainage Area (Tribal Land – Not assessed)

These drainage areas and the surface waters assessed as "attaining" or "impaired" are illustrated on the following watershed map. Methods used to complete these assessments are described in the "Surface Water Assessment Methods and Technical Support" document.

# onitoring Summary Sampling period: 11/12/2013 - 5/21/2014

10.229 Miles

Site Name(s)	Site ID #	DEQ#	Sampling Agency	Purpose
BELOW MERRITT DRAW	LCBRB006.74	100410	ADEQ	Ambient Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples
(3) Antimony, arsenic, beryllium, boron, cadmium, chromium, copper, lead, manganese, mercury, selenium, zinc		(1-3) Dissolved oxygen, <i>E. coli</i> , pH, SSC, total dissolved solids, bottom deposits, biocriteria

Exceedances Needing More Samples to Assess	Dissolved oxygen
Missing Core Parameters	None
Missing Seasonal Distribution	None
Lab Detection Limits Not Low Enough	Cadmium (dissolved), copper (dissolved), lead (dissolved), selenium, mercury (dissolved)

Priority	Monitoring Recommendations
Low	Collect more dissolved oxygen samples due to the exceedance. There was a biocriteria violation in 2007, but the sample collected in 2014 had a higher IBI score and the biocriterion was met in this assessment period. Use lower detection limits especially for dissolved cadmium and dissolved copper since they are part of A&W core parameters.

## **Data Gaps and Monitoring Needs**

Exceedances Needing More Samples to Assess	None
Missing Core Parameters	E. coli
Missing Seasonal Distribution	E. coli
Lab Detection Limits Not Low Enough	Cadmium (dissolved), selenium, mercury (dissolved)

Priority	Monitoring Recommendations
Medium	Continue effectiveness monitoring for SSC. Collect a verification sample for biocriteria. Collect core parameters to represent at least 3 seasons during an assessment period.

#### **Impairment Discussion**

Reach remains not-attaining for SSC. Turbidity TMDL approved in 2002. ADEQ has funded many projects in the Coyote Creek watershed that drains into the LCR. Sediment loading has considerably decreased since the last assessment. Although there were 2 single sample exceedances, either the annual median of 4 samples or 2-year median of 6 samples did not exceed the standard. Collect more samples to verify attainment.

(5) Antimony, arsenic, beryllium, boron, cadmium, chromium, copper, lead, manganese, mercury, selenium, zinc		(2-11) Dissolved oxygen, <i>E. coli</i> , pH, SSC, total dissolved solids

Exceedances Needing More Samples to Assess Dissolved oxygen, copper (dissolved)	
Missing Core Parameters	None
Missing Seasonal Distribution	None
Lab Detection Limits Not Low Enough	Cadmium (dissolved), copper (dissolved), selenium, mercury (dissolved)

Priority	Monitoring Recommendations
Medium	Collect additional dissolved copper and dissolved oxygen due to the exceedances. Use lower detection limits for dissolved cadmium and copper.

# Turbidity/SSC (1998)

FC - Attaining • FBC - Attaining • AGI - Attaining AGL - Attaining • AWC - Not Attaining

#### **Exceedances**

Parameter	Applicable Standard	Date	Result	Designated use support comments
Dissolved oxygen	7.0 mg/L	6/9/2015	4.71 mg/L	AWC is inconclusive with 1 exceedance in 4 samples.
000			39 mg/L	AWC is attaining with no median exceed- ances. The exceedance on 9/18/13 occurred during a storm event and was excluded from the median calculation.
SSC 25 mg/L	5/28/2014	34.1 mg/L		
Biocriteria	IBI ≥ 52 attaining IBI 46 - 51 inconclusive IBI ≤ 45 violating	5/28/2014	IBI 17	AWC is inconclusive with 1 violation of biocriteira.

## onitoring Summary Sampling period: 9/18/2013 - 6/9/2015

Site Name(s)	Site ID #	DEQ#	Sampling Agency	Purpose
DOWNSTREAM OF NEL- SON RESERVOIR	LCNUT013.33	101722	ADEQ	TMDL Monitoring
AT HIGHWAY 180 NEAR MILEPOST 407	LCNUT011.29	101988	ADEQ	Ambient Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples
(4) Antimony, arsenic, beryllium, boron, cadmium, chromium, copper, lead, manganese, mercury, selenium, zinc		(1-5) Dissolved oxygen, <i>E. coli</i> , pH, SSC, total dissolved solids, bottom deposits, biocriteria

Exceedances Needing More Samples to Assess	Dissolved oxygen
Missing Core Parameters	None
Missing Seasonal Distribution	None
Lab Detection Limits Not Low Enough	Cadmium (dissolved), selenium, mercury (dissolved)

Priority	Monitoring Recommendations
Medium	Continue effectiveness monitoring. Collect a follow-up macroinvertebrate sample to confirm the bioassessment result.

#### **Impairment Discussion**

Remains not attaining for turbidity/SSC. Turbidity TMDL completed in 2000. Although there were no SSC median exceedances, the biocriteria violation could indicate a persistent fine sediment problem.

Category 4A

		8/22/2013	5.74 SU	AGL, FBC and AWC are attaining. All
рН	6.5 SU	6/25/2014	5.62 SU	exceedances occurred between 9 and 10 meters deep. Low pH considered to be
		9/24/2014	6.17 SU	due to natural conditions in this narrow deep lake.

## onitoring Summary Sampling period: 8/22/2013 - 9/24/2014

Site Name(s)	Site ID #	DEQ#	Sampling Agency	Purpose
AT DAM	LCWCL-A	100092	ADEQ	Clean Lakes Program

Metal Samples	Nutrients & Related Samples	Other Samples
(2-3) Arsenic, beryllium, boron, cadmium, chromi- um, copper, lead, manganese, mercury, selenium, zinc		(5) Dissolved oxygen, pH, total dissolved solids

Exceedances Needing More Samples to Assess	Dissolved oxygen, lead (dissolved)
Missing Core Parameters	Zinc (dissolved), nitrogen, phosphorus, <i>E. coli</i> , boron, manganese, copper, lead, mercury (or mercury in fish tissue)
Missing Seasonal Distribution	Zinc (dissolved), dissolved oxygen, pH, nitrogen, phosphorus, cadmium (dissolved), copper (dissolved), <i>E. coli</i> , boron, manganese, copper, lead, mercury
Lab Detection Limits Not Low Enough	Cadmium (dissolved), copper (dissolved), lead (dissolved), selenium

Priority	Monitoring Recommendations
Low	Collect additional dissolved oxygen and dissolved lead samples due to the exceedances. Collect core parameters to represent at least 3 seasons during an assessment period.
