### San Pedro Watershed

### Watershed Description

This watershed encompasses three hydrological areas:

- San Pedro River, which begins in the mountains near Cananea Sonora, Mexico, and flows north about 100 miles through the southeast corner of Arizona to join the Gila River near Winkelman, Arizona;
- Willcox Playa, a terminal basin (does not drain out of the area), which contains a 30,000 acre ephemeral lake (playa); and
- Two relatively short drainages that flow to the Rio Yaqui in Mexico: Whitewater Draw and Black Draw.

It is a 7,015 square mile watershed is lightly populated with only 130,000 people (2000 census). Communities in the area include the rapidly growing Sierra Vista area and several historic towns, such as Tombstone, Douglas, and Bisbee. Grazing is widespread, with significant areas of irrigated agriculture located on the eastern side of the watershed. Historic copper, silver, and gold mining took place across the watershed; however, only a few mines are still active. Land ownership is divided approximately as: 40% private, 40% state, 20% federal (no tribal land). The Bureau of Land Management established a 50,000 acre San Pedro Riparian National Conservation Area in 1988 to protect this critical habitat.

Elevation varies from 4,000 feet (above sea level), with desert grassland and warmwater aquatic communities, to 10,700 feet at Mount Graham, with alpine forest. Areas above 5,000 feet typically support coldwater aquatic communities where perennial waters exist.

#### Water Resources

The area gets little precipitation, with 10-15 inches of rain and 0-5 inches of snow. Springs provide perennial flow to segments of the San Pedro River and other streams in this watershed. Concerns have been raised about ground water pumping and water demand in the rapidly growing Fort Huachuca Army Base – Sierra Vista area and the potential impact on perennial flow in the San Pedro River. In 2003, a Fort Huachuca Preservation Legislation required the Secretary of Interior to develop water use management and conservation measures necessary to restore and maintain the sustainable yield of the aquifer.

An estimate of surface water resources in the Salt Watershed is provided in the following table.

	Estimateu	Surface w	ater Resources i	ii the San	Feuro watersh	eu
	Perennial		Intermittent		Ephemeral	
Stream miles		195		665		6,610
	Perennial		Non-perennial			
Lake acres		1,319		29,471		

#### Estimated Surface Water Resources in the San Pedro Watershed

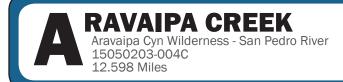

Estimated miles and acres are based on U.S. Geological Survey digitized hydrology at 1:100,000 and have been rounded to the nearest 5 miles or 5 acres. Ambient monitoring focuses on perennial waters; however, special investigations have identified water quality problems on intermittent and even ephemeral waters.

#### Assessments

The San Pedro Watershed can be separated into the following drainage areas (subwatersheds):

15050201	Willcox Playa
15050202	Upper San Pedro
15050203	Lower San Pedro
15080301	Whitewater Draw
15080302	San Bernardino Valley

These drainage areas and the surface waters assessed as "attaining" or "impaired" are illustrated on the following watershed map. Methods used to complete these assessments are described in the "Surface Water Assessment Methods and Technical Support" document.

# Add E. coli to the 303(d) list.

### FC - Attaining • FBC - Impaired • AGL - Attaining AWW - Inconclusive

### Exceedances

Parameter	Applicable Standard	Date	Result	Designated use support comments
Dissolved	6.0 m f /l	8/18/2010	4.94 mg/L	AWW is inconclusive with 2 exceedances
oxygen	6.0 mg/L	7/26/2011	5.6 mg/L	in 2 samples (binomial).
	225 of 1/400 ml	9/24/2014	488 cfu/100 mL	FBC is impaired with 2 exceedances in 4 samples. Field notes indicate that the
<i>E. coli</i> 235 cfu/100 mL	10/22/2014	435.2 cfu/100 mL	samples were collected under baseflow conditions.	
	SSC 80 mg/L	8/18/2010	1051.5 mg/L	AWW is inconclusive. The exceedance on $7/26/11$ was storm-related. Not enough samples to calculate a median for 2010. There was no median exceedance in
SSC		7/26/2011	10010.5 mg/L	
	10/22/2014	193 mg/L	2014.	
Selenium	2 ug/L	7/26/2011	16.9 ug/L	AWW is inconclusive with 1 exceedance in 5 samples.

### onitoring Summary

Sampling period: 7/22/2010 - 4/21/2015

Site Name(s)	Site ID #	DEQ #	Sampling Agency	Purpose
AT HIGHWAY 77 BRIDGE	SPARA000.28	105601	ADEQ	TMDL Monitoring
AT WOODS RANCH	SPARA010.19	100212	ADEQ	Ambient Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples
		(1-7) Dissolved oxygen, <i>E. coli</i> , pH, SSC, total dissolved solids, bottom deposits

Exceedances Needing More Samples to Assess	Dissolved oxygen, selenium, SSC
Missing Core Parameters	None
Missing Seasonal Distribution	None
Lab Detection Limits Not Low Enough	Selenium, mercury (dissolved)

Priority	Monitoring Recommendations
	Collect more <i>E. coli</i> samples in support of TMDL development. Collect more selenium, suspended sedi- ment and dissolved oxygen samples due to exceedances.

Impairment Discussion	
Add <i>E. coli</i> to the 303(d) list.
