Verde Watershed

Watershed Description

This watershed is defined by the Verde River drainage that flows into the Salt River, including Big Chino Wash and its tributaries. This 6,624 square mile watershed has an approximate population of 153,000 people (2000 census), but is growing rapidly. Although this is only 3% of the state population, several communities are located in this watershed: Payson, Sedona, Cottonwood, Verde Valley, Prescott, and the southern outskirts of Flagstaff. Land ownership is 65% federal, 23% private, 10% state, and 2% tribal. Primary land uses are open range grazing, irrigated agriculture, recreation, forestry, and some mining.

Elevations range from more than 12,000 feet (above sea level) in the San Francisco Mountains to about 1,600 feet as the Verde River flows into the Salt River. The watershed is split between warmwater communities below 5,000 feet and coldwater communities above 5,000 feet where perennial waters exist.

Water Resources

The Verde Watershed receives slightly more precipitation than most watersheds in this state, with some areas receiving about 20 inches of rain and 3 inches of snow. Therefore, the Verde River and many of its tributaries are perennial waters.

An estimate of surface water resources in the Verde Watershed is provided in the following table. Waters on Tribal lands are not assessed by ADEQ; therefore, those statistics are shown separately.

	Estimated Sundee Water Resources in the verde Watershed					
	Perennial		Intermittent		Ephemeral	
Stream miles		450		2,115		5,990
	Demonstrat		N			
	Perennial		Non-perennial			
Lake acres		4,603		3,636		

Estimated Surface Water Resources in the Verde Watershed

Additional Surface Water Resources located on Tribal Land – Not Assessed

	Perennial	Intermittent	Ephemeral
Stream miles	15	5	230
	Perennial	Non-perennial	
Lake acres	6	0	

Ambient monitoring focuses on perennial waters; however, special investigations may identify water quality problems on intermittent and even ephemeral waters. Estimated miles and acres are based on USGS digitized hydrology at 1:100,000 and have been rounded to the nearest 5 miles or 5 acres.

Assessments

The Verde Watershed can be separated into the following drainage areas (subwatersheds):

15060201	Big Chino Wash Drainage Area
15060202	Upper Verde River Drainage Area
15060203	Lower Verde River Drainage Area

These drainage areas and the surface waters assessed as "attaining" or "impaired" are illustrated on the following watershed map. Methods used to complete these assessments are described in the "Surface Water Assessment Methods and Technical Support" document.

Add E. coli to the 303(d) list.

VETERANS HOSPITAL	VRG0C000.60	107563	ADEQ	TMDL Monitoring
BELOW EAST PINE RIDGE DRIVE	VRG0C003.03	107562	ADEQ	TMDL Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples
(0) None		(2-4) Dissolved oxygen, <i>E. coli,</i> pH, total dissolved solids

Exceedances Needing More Samples to Assess	E. coli
Missing Core Parameters	Zinc (dissolved), dissolved oxygen, pH, nitrogen, phosphorus, cadmium (dissolved), copper (dissolved), mercury (or mercury in fish tissue)
Missing Seasonal Distribution	Zinc (dissolved), dissolved oxygen, pH, nitrogen, phosphorus, cadmium (dissolved), copper (dissolved), <i>E. coli</i> , mercury
Lab Detection Limits Not Low Enough	None

Priority	Monitoring Recommendations
High	Continue effectiveness monitoring for <i>E. coli</i> . Ongoing water quality improvements being implemented through a 319(h) grant to Prescott Creeks Preservation Association.

Impairment Discussion

Add *E. coli* to the 303(d) list. Although the reach does not meet a minimum sample requirement for storm-related *E. coli* impairment (a minimum of 10 samples in the assessment period), the reach is listed based on a weight-of-evidence approach: - The reach is a tributary to Granite Creek, which is already impaired for *E. coli*, and

- Intensive monitoring for Granite Creek and its tributaries identified *E. coli* to be a watershed-wide water quality problem. Granite Creek *E. coli* TMDL completed in 2015 and pending approval from EPA.

onitoring Summary

Sampling period: 7/20/2010 - 4/25/2011

Site Name(s)	Site ID #	DEQ #	Sampling Agency	Purpose
BELOW FOREST SERVICE ROAD 618	VRWLK000.99	108382	ADEQ	Ambient Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples	
(4) Antimony, arsenic, beryllium, boron, cadmium, chromium, copper, lead, manganese, mercury, selenium, zinc	(4) Ammonia, nitrite/nitrate, nitrogen, phosphorus, total Kjeldahl nitrogen	(4) Dissolved oxygen, <i>E. coli</i> , pH, total dissolved solids	

Exceedances Needing More Samples to Assess	None
Missing Core Parameters	None
Missing Seasonal Distribution	None
Lab Detection Limits Not Low Enough	None

Priority	Monitoring Recommendations		
	Good core parameter coverage.		
Low			

Nitrogen, low dissolved oxygen and high pH (EPA 2004)

FC - Inconclusive • FBC - Impaired • AGI - Inconclusive AGL - Inconclusive • AWW - Impaired

Exceedances

Parameter	Applicable Standard	Date	Result	Designated use support comments
		9/14/2011	3.66 mg/L	AWW remains impaired with 4 exceed-
Dissolved		9/20/2011	4.6 mg/L	ances in 17 samples (binomial).
oxygen	6.0 mg/L	7/30/2013	1.86 mg/L	
		9/11/2014	4.68 mg/L	
Mercury (dissolved)	0.01 ug/L	8/31/2010	0.09 ug/L	AWW chronic is inconclusive. Note: This is an estimated value below the reporting limit.
		6/16/2011	9.5 SU	AGI, AGL, FBC and AWW remain im-
рН	9.0 SU	7/20/2011	9.4 SU	paired. See Impairment Discussion below.
		8/9/2011	9.3 SU	
Total nitro- gen	1.0 mg/L Annual mean	2011	1.1 mg/L	AWW and FBC remain impaired with 1 annual mean exceedance.

onitoring Summary

Sampling period: 8/31/2010 - 9/11/2014

Site Name(s)	Site ID #	DEQ #	Sampling Agency	Purpose
AT DAM	VRWAT-A	101353	ADEQ	Clean Lakes Program
MID LAKE	VRWAT-B	101354	ADEQ	TMDL Monitoring
SOUTH END	VRWAT-SO	102564	ADEQ	TMDL Monitoring

Metal Samples	Nutrients & Related Samples	Other Samples
(1-19) Antimony, arsenic, beryllium, boron, cadmium, chromium, copper, lead, manganese, mercury, selenium, silver, zinc		(7-45) Dissolved oxygen, <i>E. coli</i> , pH, total dissolved solids

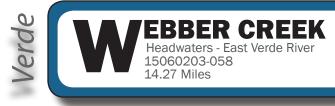

Data Gaps and Monitoring Needs

Exceedances Needing More Samples to Assess	Mercury (dissolved)		
Missing Core Parameters	None		
Missing Seasonal Distribution	Zinc (dissolved), cadmium (dissolved), copper (dissolved), <i>E. coli</i> , boron, manganese, copper, lead, mercury		
Lab Detection Limits Not Low Enough	Lead (dissolved), mercury (dissolved), selenium		

Priority	Monitoring Recommendations
High	Collect more dissolved mercury samples due to the exceedance.

[Impairment Discussion
	TMDL pending approval from EPA. Although only 3 out of 17 samples exceeded the pH standard (attaining based on the binomial rule), it will remain on the 303(d) list as it is associated with high nutrient levels in the lake.
