A.A.C. R18-9-C302 (A) & (B)	
A.	A 2.02 General Permit allows for intermediate stockpiles not qualifying as inert material under A.R.S. §49-201(19) at a mining site.
B.	Notice of Intent to Discharge - A.A.C. R18-9-C302(B)
	An applicant shall submit the construction and operation specifications used to satisfy the requirements in subsection (C)(1).
Comment	

Design and Operational Requirements - A.A.C. R18-9-C302(C)	
C.	
Y: yes, meets the requirement; N: no, does not meet the requirement (see comment below); NA: does not apply	
1.	An applicant shall design, construct, and operate the stockpile so that it does not impound water. An applicant may rely on storm-water run-on controls or facility design features, such as drains, or both.
Comment	
2.	An applicant shall direct storm runoff contacting the stockpile to a mine pit or a facility covered by an individual or general permit.
Comment	
3.	A permittee shall maintain any engineered feature of the facility in good working condition.
Comment	
4.	A permittee shall visually inspect the facility at least quarterly and repair any defect as soon as practical.
Comment	
5.	A permittee shall not add hazardous substances to the stockpiled material.
