ADEQ Issues Particulate Matter-10 High Pollution Advisory for Yuma on Saturday as Winds Expected to Stir Dust

PHOENIX (April 24, 2015) -- The Arizona Department of Environmental Quality is issuing a High Pollution Advisory (HPA) for the Yuma area for Saturday April 25 for PM-10, or particulate matter 10 microns or less in size.

This HPA is being issued because winds are expected to generate considerable amounts of blowing dust in Yuma this weekend. In addition to the PM-10 High Pollution Advisory tomorrow, a PM-10 Health Watch is issued for the city of Yuma and vicinity for Sunday April 26.

ADEQ recommends that children and adults with respiratory problems avoid outdoor activities on Saturday and suggests the general public limit outdoor activity throughout the day. Yuma and area residents should avoid activities that generate dust like driving on dirt roads; avoid using leaf blowers; and eliminate wood burning in fireplaces, stoves, chimineas and outdoor fire pits.

PM-10 is extremely small solid particles and liquid droplets found circulating in the air which comes from stirred dust or combustion from either cars, industry or wood burning. High levels of PM are typically created when the air is especially stagnant or especially windy. One particle of PM-10 is about one-seventh the size of a human hair.

ADEQ provides a daily air quality forecast for the Yuma area at <http://www.azdeq.gov/enviro/air/ozone/yumef.pdf> . To subscribe to the Yuma daily air quality forecast, go to <https://public.govdelivery.com/accounts/AZDEQ/subscriber/new> , enter your email address and check "Yuma Ensemble Forecast."
